

CHUKWUBUONYEOMA TANSI AJUFO

SOFTWARE | SECURITY | SYSTEMS ENGINEER

+353 89 203 9161 • tansiajufo@gmail.com • Dublin, Ireland • linkedin • Github

PROFESSIONAL SUMMARY

Computer Science and MSc Cybersecurity graduate with hands-on experience building software, automation, cloud and security solutions across Python, JavaScript and Linux environments. Built Python orchestration and benchmarking tooling that produced 7,886 valid measurements across 81 MQTT/TLS test conditions, developed an AI/ML intrusion-detection pipeline on 286,450 IIoT samples across 15 classes, and supported the technology environment behind 100+ distributed digital advertising screens. Experienced in secure application engineering, troubleshooting, testing, cloud monitoring and technical documentation. CompTIA Security+ certified and Cisco-accredited, with a strong interest in software engineering, security engineering, AI infrastructure and reliable systems.

WORK EXPERIENCE

OPPORTUNITY TO SEE LIMITED

Lagos, Nigeria

Site Support Engineer

December 2022 - September 2025

- Built and maintained a JavaScript-based campaign management platform used to organise advertiser activity and operational records, improving visibility and reducing repetitive manual administration.
- Developed Python and JavaScript automation workflows for recurring reporting and operational tasks, improving data consistency and reducing manual processing.
- Supported the software and infrastructure behind 100+ distributed digital advertising screens, diagnosing application, connectivity and system faults and coordinating fixes when issues affected service delivery.
- Managed deployment and onboarding of business software and third-party tools, validating configuration, user access and operational readiness before production use.
- Produced technical documentation, repeatable support procedures and troubleshooting workflows to improve knowledge transfer and resolution of recurring technical issues.

EXCITE PANACEA LIMITED

Lagos, Nigeria

Software Developer

January 2022 - November 2022

- Developed client-facing web applications and interactive functionality using JavaScript, contributing to implementation, testing, debugging and iterative releases within an Agile team.
- Participated in code reviews, sprint delivery and technical documentation, working with developers to improve code quality and maintain clear project records.
- Performed functional and non-functional testing, documented defects and supported troubleshooting throughout the application development lifecycle.
- Incorporated stakeholder and design feedback into subsequent releases, improving application usability and functionality.

OUTDOOR ADVERTISING ASSOCIATION OF NIGERIA (OAAN)

Lagos, Nigeria

IT Support Desk Analyst

April 2021 - November 2021

- Provided first-line support for user accounts, devices, email, connectivity and business applications, diagnosing faults and escalating complex technical issues when required.
- Logged, prioritised and tracked support requests through resolution and documented recurring issues to improve future troubleshooting and user support.
- Configured work devices, managed user permissions and software updates, and supported digital tools used for communications, meetings and industry records.

SELECTED ENGINEERING PROJECTS

PQC-MQTT Performance Automation Testbed

June - August 2026

- Built a four-layer Ubuntu Server testbed and Python orchestration framework for MQTT 5.0/TLS 1.3 experiments using OpenSSL/OQS, Eclipse Mosquitto, Paho MQTT, psutil, pandas and Linux tc/netem.
- Automated 81 experimental conditions and produced 7,886 valid measurements across handshake latency, throughput, end-to-end latency, CPU, memory and connection reliability.
- Documented architecture, reproducible setup, statistical analysis, engineering trade-offs and deployment findings in a public GitHub repository.

Adversarial-Resilient Industrial IoT Intrusion Detection

April 2026

- Built a Python machine-learning pipeline using a 286,450-sample IIoT dataset across 15 classes, comparing Random Forest, CNN, BiLSTM and a hybrid CNN-BiLSTM-Transformer model.
- Stress-tested the hybrid model with FGSM adversarial perturbations, measuring accuracy degradation from 93.54% on clean data to 74.70% at epsilon 0.20, and used SHAP for model interpretation.

Secure Movie Booking System - Vulnerable to Secure Engineering

December 2025

- Built and secured a PHP/MySQL booking platform with authentication, role controls, admin/user workflows and transactional booking logic.
- Identified and remediated eight application-security weaknesses including SQL injection, XSS, CSRF, insecure session handling, broken access control and race conditions using prepared statements, output encoding, CSRF tokens, secure sessions and row-level locking.

AWS Cloud Infrastructure & Monitoring Deployment

March 2026

- Deployed and hardened a Linux workload on AWS EC2 using IAM, Security Groups, TLS and host-level controls, integrating CloudWatch and Datadog for monitoring, log visibility and anomaly alerting.

EDUCATION

NATIONAL COLLEGE OF IRELAND

Dublin, Ireland

MSc Cybersecurity, Graduation October 2026

September 2025 - August 2026

Relevant modules: AI and ML in Cybersecurity, Secure Application Development, Secure Web Development, Cloud Architecture and Security, Network Security, Cryptography.

AUGUSTINE UNIVERSITY

Lagos, Nigeria

BSc Computer Science (2:1)

October 2018 - August 2022

Relevant modules: Computer Programming, Data Structures, Database Management and Design, Operating Systems, Software Engineering, Artificial Intelligence, System Analysis and Design.

CERTIFICATIONS

- CompTIA Security+ (SY0-701), 2026
- Cisco Cybersecurity Defense Analyst Career Path - Cisco Networking Academy, 2025
- Cisco Junior Cybersecurity Analyst Career Path - Cisco Networking Academy, 2025
- Cisco Network Defense, Endpoint Security and Cyber Threat Management - Cisco Networking Academy, 2025

TECHNICAL SKILLS

- **Programming & Automation:** Python, JavaScript, Java, SQL, Bash, PHP; scripting, workflow automation, debugging and code review.
- **Software Engineering:** Git/GitHub, Agile/Scrum, functional and non-functional testing, REST/API concepts, authentication/session management and technical documentation.
- **AI & Data:** TensorFlow/Keras, scikit-learn, pandas, NumPy, SHAP, Random Forest, CNN, BiLSTM, attention-based models and adversarial robustness testing.
- **Cloud, Linux & Infrastructure:** AWS EC2, IAM, Security Groups, CloudWatch, Datadog, Ubuntu Server, Linux (Ubuntu/Kali), Apache, MQTT, TCP/IP, DNS and TLS.
- **Security Engineering:** secure coding, OWASP Top 10, Nmap, Wireshark, SpotBugs, OWASP Dependency-Check, vulnerability remediation and security validation.
